Advanced NDT of Overhead Pipelines and Supports, Uran Plant

At the Oil and Natural Gas Corporation Ltd plant at Uran, Maharashtra, SOLAS MODU Marine Services performed advanced non-destructive testing of overhead pipelines and their supports. The contracted scope combined long range ultrasonic testing (LRUT), phased array ultrasonic testing (PAUT), automated PAUT and pulsed eddy current (PEC) examination across the specified lines.

The techniques were deployed in combination, pairing long range screening of the pipeline runs with detailed follow up examination of the lines and their supports. Field work, evaluation and reporting were carried out to the client's requirements, and results were handed over to ONGC for integrity and maintenance action.

ONGC issued a Job Completion Certificate for the project dated 23 December 2022, recording that the contracted work was successfully completed and carried out satisfactorily. The engagement closed in 2022 and is held on file as a completed advanced NDT reference for plant pipework.

SERVICES PERFORMED

- Long range ultrasonic testing (LRUT)
- Automated PAUT scanning
- Overhead pipeline and support coverage
- Phased array ultrasonic testing (PAUT)
- Pulsed eddy current (PEC) examination
- Job completion reporting
